

## **IMPORTANT SAFETY NOTICE**

Removing damaged glass affects the camera connected to the windshield. Recalibration of this camera is required by the vehicle manufacturer after a windshield replacement to help ensure the vehicle's advanced safety features work properly. These features may include automatic braking, lane assist and forward collision warning.

While we strive to recalibrate every camera attached to the windshield after the windshield is replaced, there may be times when it is not possible. There may also be times when we are instructed by you or your representative *not* to recalibrate the camera after a windshield replacement. **In these situations, the advanced safety system may not work properly and should not be relied on until recalibration has been completed by a qualified specialist.**

In the event Safelite is either (i) unable to recalibrate the camera attached to the windshield, or (ii) we are instructed by you or your representatives *not* to recalibrate the camera: You agree to release Safelite Fulfillment, Inc., its parent, affiliate companies, its agents, officers, directors and employees ("Safelite") from any and all liability, claims, demands, damages and/or judgments, including but not limited to claims of personal injury, wrongful death and/or property damage related to the function of the forward-facing camera system. You further agree to save, defend, indemnify and hold Safelite harmless from and against any third-party claim related to the function of the forward-facing camera system. To the extent that a current agreement exists between you and Safelite ("Agreement"), the terms set forth herein shall amend the terms set forth in the Agreement and be fully incorporated therein by reference.
